

Split

Table

Designer | Dawid Rószczka

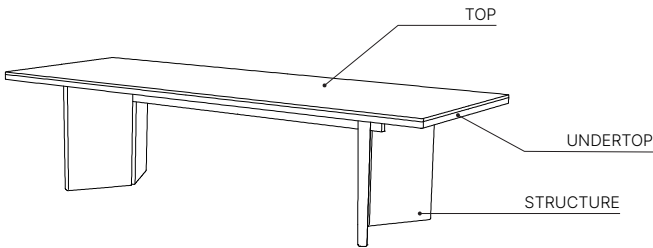

In the Split table, we looked for a diversity of simple forms that bring harmony between the matter and the void. The Split table is a combination of the monolithic heaviness which is reflected in the uniform surface of the top and the lightness that splits massive leg into two separate elements. The floating crossbar in the crack bonds everything together. That symbolizes the strong connection of two ends that can not exist one without the other.
